To whom it may concern:

Hello ! My name is Cain Susko, and I am a student of Software Engineering at Queen's University.

I believe I would be a good fit for the position because I have alot of experience both with languages like Python & Java as well as experience with systems languages like Rust and C. Additionally, I have plenty of experience working with teams for different projects using the Agile workflow. I am an excited and fast learner and I always enjoy A challenge.

Furthermore I would be a passionate employee because I have a very strong interest in system development and I would love to learn more about how different requirements affect the architecture of a final product.

Thank you for your time and consideration – and I look forward to your response.

Kindly,

Cain Susko
